Troubleshooting	
Caution: Possible Errors	

	Select ModelSelect LanguagesSE-S204NEnglish
Installing	
	 Do not drop the drive, and protect it from severe shocks. It can damage the drive or cause it to malfunction.
	► Do not place the drive in direct sunlight.
	Avoid low-or high-temperature environments.
	Avoid high-humidity environments.

	Select ModelSelect LanguagesSE-S204NEnglish
Operating	
	Handle with caution to prevent damage from an external shock.
	 Do not drop the drive, and protect it from severe shocks. It can damage the drive or cause it to malfunction.
	 Do not move the drive while in operation and do not attempt to open the disc tray by force. Make sure to close all working programs before attempting to open the tray and always use the open/close button. Do not insert a pin into the emergency opening while in operation. Do not insert hands in the tray while in operation. This may cause damage to the product or human body
	 Do not use cracked, distorted or damaged discs. In particular, a disc with a crack on the inner tracks may break while in use.
	 Do not turn the power off or disconnect the power cord while the drive is working. This may result in an operational error.
(especially around the center	disc is not cracked before use. If you find a crack on the disc hole), make a copy of the disc immediately and use the copy instead. isc will cause the crack to become bigger, resulting in irreparable damage

Continued use of a cracked disc will cause the crack to become bigger, resulting in irreparable damage to the disc.

Do not use low-quality discs (illegal, scratched, damaged, etc.).

Samsung is not responsible for any loss resulting from the use of such discs.

	Select Model Select Languages SE-S204N English
Others	
	Never allow food particles or foreign substances to enter the drive casing.
Warning C C C	To protect against the risk of fire, do not spill such liquids as alcohol and benzene on the drive.
	 Do not disassemble, attempt to repair or modify the device without an express approval as directed in the manual. To reduce the risk of damage, electric shock, and fire.
	 Do not shock or disassemble the AC/DC Adaptor. This may result in an operational error or electric shock. * Use the AC/DC Adaptor provided by Samsung.

RoHS

Samsung Eco-mark The Samsung's own Eco mark helps consumers to easily understand that Samsung develops eco-friendly products. This mark represents Samsung's continuous effort to develop ecofriendly products.

RoHS (Restriction of the use of certain hazardous substances in electrical and electronic equipment)The RoHS, the environmental regulation announced by European Union, restricts the use of lead, mercury, cadmium, hexavalent chromium, PBB, and PBDE in products put on the market in The European Union after July 1, 2006.

WEEE

Correct Disposal of This Product (Waste Electrical & Electronic Equipment)

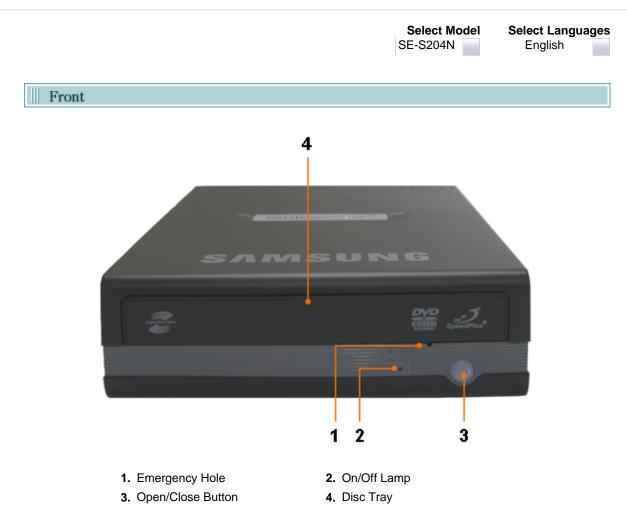

(Applicable in the European Union and other European countries with separate collection systems)

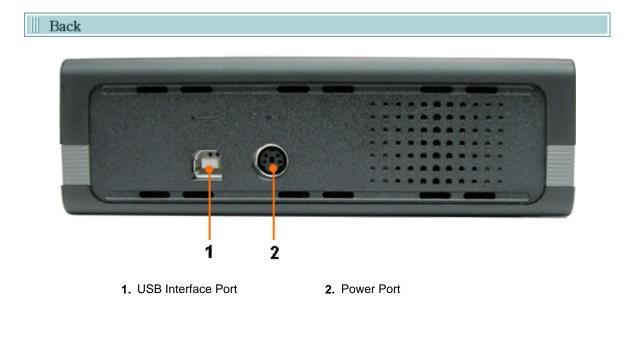

This mark shown on the product or its literature, indicates that it should not be disposed with other household wastes at the end of its working life. To prevent possible harm to the environment or human health from a uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take this item for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract. This product should not be mixed with other commercial wastes for disposal.

• Design and specifications are subject to change without prior notice.

Installing Drive

1. Turn the PC Off.

2. Connect the necessary cables, then turn on the drive

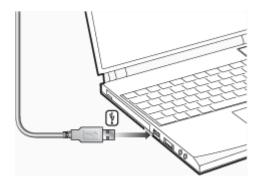

- Connect the USB Cable to the drive 's USB connector.
- Connect the supplied AC power cord to the supplied AC/DC Adaptor.

Then connect the AC/DC Adaptor to the drive 's DC IN jack, and connect the power cord to the power outlet.

- Then turn on the drive

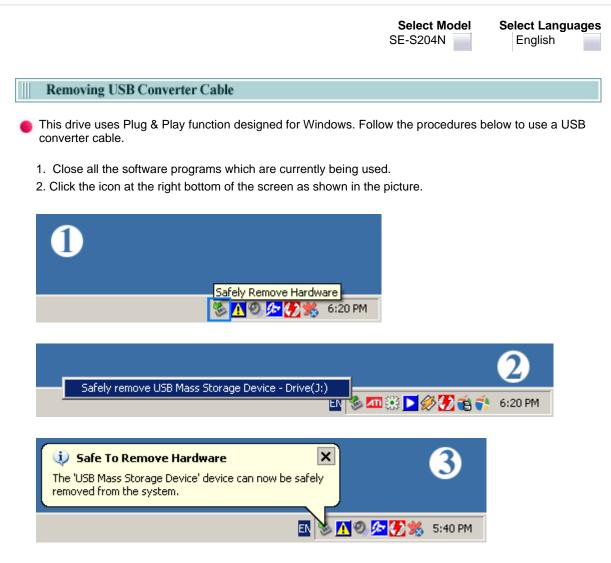

3. Connect the other end of the of the USB cable to your computer.

If your computer is not equipped with a USB connector, install a USB interface card.

CUP

3. Disconnect the USB converter cable.

Do not disconnect the USB converter cable while the drive is in operation or the computer is getting started.

In order to use this drive at the speed of USB2.0 on PCs not supporting USB 2.0, you need to install USB 2.0 adapter card. Otherwise, this drive will operate by connecting USB 1.1, but within the speed range of USB 1.1. You can check the type of USB 2.0 adapter card for your PC as follows.

Windows 2000/XP/Vista

Right-click on My Computer icon on your desktop and select properties. Then, click on Hardware tab and Device Manager Button in order, and then check the information. If a yellow "exclamation point" appears next to Universal Serial Bus Controller, contact the card or PC manufacturer.

Select Languages English

Firmware Update

- 1. Go to http://samsung-ODD.com
- 2. Click Firmware on the menu bar (in the upper right-hand corner).
- 3. Click Firmware Downloads. Check for your drive model and start downloading.

How to Use a Vertically Installed Drive

This drive can be installed vertically.

You can use only the **4.72 Inch (12cm) discs.** (You cannot use the **3.15 Inch (8cm) discs)** The drive cannot read the disc properly if any part of the disc is placed outside the tray guiding line.

Select Languages English

How to Use DVD±R/RW and Other Discs

The External DVD Writer allows writing DVD RW discs using Nero Express and enables "packet writing" (high-speed recording) using InCD. The drive also allows writing DVD R discs using Nero Express.

Unauthorized copying of DVD or software titles is illegal and the individuals that make illegal copies will be held responsible for any copyright infringement. Using low-quality discs may lengthen the recording time or not supporting due to reduction in double speed.

- You can use the External DVD Writer to playback music CDs, CD-ROM, CD-R/RW, or DVD-ROM discs, like a CD-ROM drive or a DVD-ROM drive. If your computer recognizes the [CD-ROM] icon designated to the External DVD Writer as the 'E:' drive, insert a CD-ROM or a DVD-ROM disc and access the 'E:' drive.
- To Playback a DVD Video Disc :
 - You need a DVD decoder board or the DVD decoder software program.
 - Use Nero Show Time to change the region code of the External DVD Writer.

DVD Region Protection Coding (RPC):

The RPC feature is supported on DVD players and is used with DVD-video discs (such as movies). Currently, the motion picture industry has divided the world into different regions or zones that correspond to the regional markets intowhich the motion picture industry releases movies. Simply put, RPC codes are placed on movies marketed throughout the world, based on the region of the world inwhich they are being sold. These RPC codes help control and prevent pirating of new movies into other motion picture regions prior to their true release dates within those markets.

The SE-S204N DVD Writer supports RPC phase II. In the RPC-2 mode, the local code can be changed by users. RPC-2 is selected by default for The SE-S204N DVD Writer.

You can change the region code up to five times via an MPEG application.

Please contact your dealer or local SAMSUNG representative if you wish to change the local code more than five times.

Select Languages English

What is a MAGIC SPEED?

MAGIC SPEED is a program that supports users to select at his or her discretion the reading speed of CD disc between two modes offered by drive: Maximum Speed Mode (Max Mode) and Silent Mode.

Development Background

ODD products launched nowadays are providing a high reading speed.

With the increased reading speed, faster data processing has become possible. However, high rotation speed often causes louder noise, and it is more possible to crash the cracked or bent discs. Against this backdrop, our Company has developed a speed-down algorithm and applied this technology to newly-launched products to provide safer and more comfortable environments for PC users.

* What is Speed-down Algorithm?

It establishes a safer disc reading speed in operating the device in order to prevent possible disc crashes in using CDs with cracks in starting. In addition, for customers who want to play CDs at its maximum speed, MAGIC SPEED program offers the function of selecting reading speed, so that customers can set the speed as they want. (Recording speed will run at recordable speed without limit)

What Are MAGIC SPEED Modes and How to Use

MAGIC SPEED Modes

- Max Mode: Setting reading speed to its maximum level provided by drive.
- Silent Mode: Setting reading speed to a stable low speed.
- Since modes set by MAGIC SPEED function will be maintained in using the drive connecting other PC, please confirm first the setting status before use.

Caution: A disc with crack may be crashed in playing with Max Mode. We recommend you to use such disc in Silent Mode, or make a copy immediately before use.

How to Use MAGIC SPEED

- First, install MAGIC SPEED program registered on our website.
- On MAGIC SPEED tray icon, select right-click to execute the program.
- Select the mode you want to use on Program Execution Window and select "settings". Then, reading speed of the drive will run in selected mode.
- Select "Close" to exit Program Execution Window. In this occasion, reading speed will be run in the set speed if there is no separate mode change or program exit.
- * We recommend you to use "Max Mode" for data copy or disc copy, and "Silent Mode" for normal operation.
- ※ Other functions
 - To disable Auto Run

This is a default program that automatically runs in every PC booting. If you want to quit this auto run function, deselect the auto run item selected on tray icon menu.

Where Can I Download MAGIC SPEED?

Visit our website for customer support (URL:www.samsung-ODD.com), and select Firmware \rightarrow MAGIC SPEED.

đ

This part of the manual is to prevent damages or data loss. Read carefully and use the device properly.

Storing the Disc

- Do not place it under the direct sunlight.
- Place it so that it sits on its side on a flat surface.
- Do not scratch or place a label on the disc.
- Handle the disc with caution to prevent damage from an external shock.
- Do not expose it to severe temperature-fluctuations.

(Exposure to such environment may cause congealing.)

Select Languages English

This part of the manual is to prevent damages or data loss. Read carefully and use the device properly.
Cleaning the Disc
Do not touch the surface of the disc. Place your fingers on the edge of the disc to hold.
Clean the disc lightly with soft cotton cloth, starting from the center and move to the edge of the disc.
Use only disc-cleaning liquids. Do not use benzene, paint thinner, or any other solvents.
If the disc surface becomes dirty with fingerprints, foreign substances or dust, the disc may not function properly.

Caution: Possible Errors

External DVD Writer record data on the disc by applying laser light onto the surface of the CD DVD, and therefore writing errors may occur if you use a damaged CD DVD, for example. Be sure to eliminate the following error-causing elements before you start writing:

* The following settings are recommended for all External DVD Writer:

- **1**. Avoid a situation that requires multitasking , and remove turn off the screen saver.
 - A buffer underrun may occur if the system multitasks while the External DVD Writer CD-RW drive is writing/erasing.

2. Block any outside attempt to access the host PC during a writing session.

 An error may occur if another user accesses the printer connected to his/her the system via the network during a writing session.

3. Disable the CD auto - run feature of the CD.

- Inserting an auto run-enabled CD in to another drive connected to the same system during a writing/erasing session may cause an error.
- 4. It is recommended that you use the image file format when you write a large number of smallsized files.
 - When there are a large number of small-sized files to write , the system's transmission rate drops and the Superlink feature works at a more frequent rate, resulting in lower writing quality.
 - If you are doing a CD-to-CD write, it is not necessary to check to see if you have available space on your hard disc beforehand.

However, in the case of image files, it is recommended that you be sure you have at least twice the amount of space needed for the data on your hard disc , as image files are copied to the hard disc before they are copied to the CD.

5. Do not use more than one type of writing software.

Before you install a writing program, be sure to first uninstall existing versions of the program or other writing program (s) and reboot the system first.

(The Windows operating system may be damaged if you install the Korean version while the English version remains on the system.)

Use only the writing software provided by Samsung.

You may experience writing errors if you use with other writing programs.

The write speed for a disc can be restricted if:

1. The disc has bad properties data , and or there are other discs with different properties available under the same ID.

The drive's write strategy is set in a way that the drive examines to examine the disc properties and determines the optimal write conditions for those properties.

For example, many disc makers do not bother to insert property information distinguishing 48X discs from 32X discs . Since the two types of discs have the same properties data , although they actually have different properties, it is often impossible to respond to the situation with a single write strategy. In order to ensure stable writing , it is necessary to downgrade the write speed.

If discs from two different disc makers have the same write speed according to the labels , but actually have different write speeds , it is necessary to downgrade the write speed to ensure stable writing.

2. Samsung's Standards for Write Speed Restriction

Standards 1Write speed is downgraded for the sake of write stability , if high-speed
discs available in the market have particularly bad properties data , or there
are low-speed discs available under the same ID.

Speed-restricted discs go through further examination and adjustments later. If high-speed discs are available under the same ID with as low-speed

Standards 2

discs (speed restricted at present), the speed restriction is removed when the low-speed counterparts become no longer unavailable in the market under the same ID.

You may experience lower write quality in case if you use disc products by some disc makers which that are not registered with the product's firmware.
 Therefore, it is recommended that you use only discs by recommended companies. Even , and even if the write session is completed successfully, check the write quality before you put the disc in storage , especially in case of an important data backup.
 (Samsung is not responsible for any loss resulting from data backup failure.)

Note

- Does not support DVD-R for Authoring.
- Cannot playback or record on both sides of a two-sided disc simultaneously.
- The read/write capacity of the supported discs depends on the condition of the disc and the recording format of the drive. Therefore, the read/write quality may not be perfect.
- Severe vibration or external impact may decrease the quality of printed images. Please firmly place the product onto the PC before use.
- In case of disk identification error message, thoroughly clean the surface of the disk

where the label is presented and then start printing.

- The quality of the printed image cannot be ensured if printing an image on the area which is already used for printing.
- For more information on the writing and duplicating the Lightscribe disk label, install Nero software and refer to the HELP section.

🌃 Fcc information to the user

This equipment has been tested and found to comply with the limits for a class B digital device. pursuant to part 15 of the FCC rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. this equipment generates.

Uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception Which can be determined by turning the equipment off and on. The user is encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio TV technician for help.

CAUTION

Change or modifications not expressly approved by the manufacturer responsible for compliance could void the user's authority to operate the equipment.

Laser Standand
